

Polaris RZR Fang Light Harness

Thank you for purchasing XTC Power Products Plug & Play POL-RZR-FLH Fang Light Harness. This Light Harness is used when you add the new Fang Lights to an older RZR that was not factory wired for the fang lights. The cable ends are plugged into the new Fang Lights then attached to the Keyed Accessory Busbar Post. When installed, the new Fang Lights will come on with the key.

Please read the instructions fully and familiarize yourself with the components before starting the install. These instructions assume you are adding the Fang Lights to an RZR that did not come with them.

1. Remove the front Grille and the OEM plastic inserts where the fang lights will go.

2. Run the harness – Set the harness on the cross member, run one of the 2 Pin Connectors to the right opening and one to the left opening.

3. Plug the harness into each light and mount the lights in the openings.

4. Attach the Red Wire to the left Accessory Post on the Factory Busbar. Attach the Black Wire to the Ground Post.

5. Test the system – White lights should come on when the key is turned on.
6. Secure the light harness with the provided cable ties and re-install the grille.
